Fullstack web developer with experience in freelance projects and a focus on continuous improvement. With a solid background in application development and management, I have worked on various projects that have allowed me to apply and refine my skills in technologies like Next.js, TypeScript, and MongoDB. I am passionate about creating efficient and scalable solutions, and I am always looking for new opportunities to learn and tackle technical challenges. My experience has taught me to manage projects comprehensively, from planning to deployment, always maintaining a focus on quality and results.

PROFESSIONAL EXPERIENCE

Listo Chile   **Remote**
Frontend Developer (Part-time)   *January 2025–Present*

- Development and maintenance of the frontend of a web application using React and React Router DOM.
- Integration of GraphQL APIs, optimizing queries to improve client performance and efficiency.
- Collaboration with the backend and design teams to ensure a smooth and intuitive user experience.
- Implementation of best practices in frontend development, ensuring clean and reusable code.

Inventory System (Personal Project)   **Santo Domingo, Dominican Republic**
Fullstack Developer   *November 2024–Present*

- I designed and developed a multitenant SaaS for inventory management, allowing multiple businesses to efficiently manage their products.
- I implemented the frontend with Next.js and Tailwind CSS, ensuring a modern and responsive interface.
- *I developed the backend using Server Actions with Prisma and PostgreSQL, optimizing data management.*
- *I deployed the application on Vercel, ensuring optimal performance and continuous availability.*

(Proyecto freelance)   **Santo Domingo, Dominican Republic**
FullStack mobile developer (Freelance)
                                                                                          January 2023–May 2023

- I developed a mobile application that performed CRUD operations for calculations and tasks used by employees in the company.
